

NIGAR KANA

Software QA Engineer | Test Automation | Playwright | API Testing

ISTQB Certified | Playwright | Selenium | API Testing | Open to Relocation

Richmond, British Columbia, Canada | +1 672-833-7775 | nigarkana@gmail.com | linkedin.com/in/nigarkana | github.com/nigarkana | nigarkana.github.io

SUMMARY

Software QA Engineer with 10+ years of progressive experience delivering quality assurance across telecom, government, and e-commerce applications. Skilled in manual and automated testing with Playwright and Selenium, API testing with Postman, SQL-based data validation, and performance testing with JMeter and k6. Proven track record leading QA teams, defining test strategy, and reducing manual testing effort through automation. Comfortable working in Agile environments across cross-functional and cross-timezone teams. Eligible to work in Canada.

CORE COMPETENCIES

Test Strategy & Planning • Test Automation • API Testing • Regression & Risk-Based Testing • Requirements Analysis • Defect Management • Release Validation • Cross-Functional Collaboration

SKILLS & EXPERTISE

Programming Languages	Python, JavaScript
Test Automation	Playwright, Selenium, Robot Framework
API Testing	Postman, REST APIs, OpenAPI
Performance Testing	JMeter, k6
Databases	SQL, MySQL
Tools & Platforms	Jira, Confluence, Trello, Bugzilla, Git, GitHub Actions, PyCharm, VS Code
Methodologies	Agile, Scrum, SDLC, STLC
AI-Assisted Quality Engineering	ChatGPT, Claude, Claude Code (AI coding assistant) — test case generation, automation framework/script development, exploratory/bug analysis

EXPERIENCE

Software QA Engineer (Volunteer)

A Fish Company — Surrey, BC, Canada

Feb 2026 – Present

3 hrs/week

- Designed, executed, and maintained manual test cases (smoke, functional, regression, end-to-end) for a live Shopify e-commerce site, covering product browsing, cart, checkout, payment (Visa, Mastercard, Apple Pay, Google Pay, Shop Pay), and order confirmation.
- Validated product catalog accuracy across multiple product categories — pricing, variants, inventory status, images, promotional content — and confirmed business rules including delivery eligibility, shipping charges, and free-delivery thresholds.
- Performed cross-browser and cross-device testing (desktop/mobile), surfacing functional, usability, and responsive-design issues, and validated customer-facing forms (newsletter signup, contact inquiries).
- Developed and maintained a Playwright automation framework using JavaScript to automate regression testing for critical Shopify workflows (product search, cart, checkout) and integrated it with GitHub Actions for continuous execution.
- Validated REST API request/response payloads using Postman and performed k6 load testing to verify application stability under concurrent traffic.
- Logged, triaged, tracked, and verified 50+ defects throughout the software development lifecycle in Trello — from identification through closure — collaborating with developers to confirm fixes ahead of releases.
- Leveraged ChatGPT, Claude, and Claude Code (AI coding assistant) to accelerate test case generation, automation framework/script development, and exploratory/bug analysis, applying manual review and validation to all AI-assisted outputs.

Test Team Lead (Consultant), Urban Resilience Project (URP)

RTI International, USA — Dhaka, Bangladesh

Mar 2020 – Dec 2023

- Led a cross-functional QA team delivering end-to-end quality assurance for the Electronic Construction Permitting System (ECPS), gathering business requirements directly from end users and collaborating with stakeholders, developers, and government users throughout the SDLC.
- Defined QA strategy, release readiness criteria, and a risk-based testing approach; designed test frameworks and maintained test environments that closely replicated production systems.
- Directed testing for the integration of a secure payment gateway into the ECPS, enabling seamless transactions via debit, credit, and mobile banking platforms.

- Developed and executed test plans and test cases spanning functional, integration, regression, end-to-end, UAT, and API testing; managed defects through their full lifecycle — identification, triage, verification, and closure — using the Incident Management bug tracker.
- Executed load, spike, and stress testing using JMeter to validate system performance under peak conditions.
- Automated high-risk, repetitive test cases using Selenium and Python, reducing manual testing effort by 20% and increasing team efficiency by 15%.
- Directed task tracking in Jira and led documentation and knowledge-sharing efforts in Confluence.

Sr. Software Quality Assurance Engineer

Sep 2018 – Feb 2020

Wipro Ltd. (GrameenPhone Project) — Dhaka, Bangladesh

- Executed real-time testing for 20+ solutions across Bangladesh's largest telecom network to ensure performance and reliability.
- Established and managed pre-production backend testing environments, including MySQL databases, to support effective System Integration Testing (SIT).
- Executed API and backend validation to ensure seamless integration between telecom applications and enterprise systems.
- Diagnosed root causes of incidents and problems and implemented corrective measures to prevent recurrence.
- Led 25+ User Acceptance Testing (UAT) cycles and delivered 55+ training sessions for end users and stakeholders.
- Collaborated effectively across multiple time zones and cross-functional teams throughout the release lifecycle.
- Automated repetitive test cases using Robot Framework, reducing manual regression effort.

Software Quality Assurance Engineer (Lead)

Nov 2014 – Aug 2018

Raven Systems Ltd. (DIRD Group) — Dhaka, Bangladesh

- Tested DIRD Management Systems — HRM, Payroll, Inventory, Procurement, and Fixed Asset Management — supporting 30,000 daily users.
- Contributed to the successful release and production stability of the "Sheiboi" mobile application for Android and iOS through comprehensive functional and regression testing.
- Established standardized QA processes, tools, and best practices — test case design, execution, defect tracking, and reporting — continuously improving methodologies to increase efficiency.
- Automated high-risk, repetitive test cases using Selenium and Python, reducing manual effort by 25% and improving testing efficiency by approximately 20%.

TECHNICAL PROJECTS

Playwright Automation Framework — A Fish Company (Volunteer)

- Designed and developed the Playwright automation framework referenced above in JavaScript using Page Object Model (POM) design.
- Configured CI integration with GitHub Actions and automated HTML test reporting for streamlined result review.
- Used Claude Code to accelerate framework architecture and script development, with manual review of all generated code.
- Portfolio: nigarkana.github.io

EDUCATION

Master of Science in Applied Computer Science

2024

Fairleigh Dickinson University — Vancouver, Canada

Master of Science in Project Management

2023

University of the West of Scotland — London, UK

Bachelor of Science in Computer Science

National University — Gazipur, Bangladesh

CERTIFICATIONS

- ISTQB Certified Tester — International Software Testing Qualifications Board
- Atlassian Agile Project Management Professional Certificate
- Azure DevOps for Beginners

ADDITIONAL INFORMATION

- Availability: Open to full-time roles in Vancouver, BC (in-office) and to relocation elsewhere in Canada. Eligible to work in Canada.
