

NIGAR KANA

Software QA Engineer | Test Automation | API Testing | ISTQB Certified

Richmond, British Columbia, Canada | +1 672-833-7775 | nigarkana@gmail.com

linkedin.com/in/nigarkana | github.com/nigarkana | nigarkana.github.io

PROFESSIONAL SUMMARY

Software QA Engineer with 6+ years of experience testing telecom, government, and retail applications. Strong in both manual and automated testing, with Playwright and Selenium for UI automation, Postman for API testing, SQL for data validation, and JMeter, k6, and Lighthouse for performance work. Have led QA teams, defined test strategy, and set up automation in CI/CD pipelines with GitHub Actions. Automation work at RTI International cut manual testing effort by 20%, and I have run more than 25 UAT cycles with government and enterprise users. ISTQB Certified and eligible to work in Canada. Open to onsite, hybrid, and remote roles.

TECHNICAL SKILLS

Programming:	Python, JavaScript
Test Automation:	Playwright, Selenium, Robot Framework
API Testing:	Postman, REST APIs, OpenAPI
Performance Testing:	JMeter, k6, Lighthouse
Databases:	SQL, MySQL
CI/CD and Environments:	GitHub Actions, Docker, test environment setup and maintenance
Tools and Platforms:	Jira, Confluence, Trello, Bugzilla, Git, PyCharm, VS Code
Methodologies:	Agile, Scrum, SDLC, STLC, risk-based testing, regression testing
QA Practices:	Test strategy and planning, requirements analysis, defect management, release validation, UAT facilitation
AI-Assisted Testing:	ChatGPT, Claude, Claude Code, GitHub Copilot for test case generation, automation scripting, and bug analysis

PROFESSIONAL EXPERIENCE

Information Systems Quality Assurance (QA) Analyst

Feb 2026 to Present

Swavu Ltd., Remote, Canada (Rwanda-based retail platform)

12-month contract

- Only QA engineer on a mobile and web retail platform covering loyalty, product authenticity and QR verification, shop locator, and returns. Set up the QA process for a team of 3 developers that had none before.
- Built a Playwright automation framework for the web and mobile surfaces and connected it to GitHub Actions, so regression tests now run on every merge instead of being done by hand.
- Wrote the 12-month QA strategy covering test types, coverage targets, environments, tooling, and test data, along with a test case library for all modules.
- Set up defect tracking and triage workflows and a weekly reporting cadence that the team now uses to decide whether a build is ready to release.
- Mapped the Mobile to Zoho Mail to CRM integration end to end and wrote test scenarios for each stage, which caught several integration defects before release.
- Used GitHub Copilot and Claude to speed up test scripting and keep up with a two-week delivery cycle.

Software QA Engineer (Volunteer)

Jun 2026 to Present

Mothers Language Lovers of the World Society, Surrey, BC, Canada

3 hrs/week

- Built and maintain a Playwright benchmark suite for motherlanguagelovers.com to baseline the current site before a redesign, so the new build can be compared against it.
- Added visual regression testing with full-page screenshots across several pages and viewports to catch layout and UI changes.

- Ran accessibility audits with axe-core against WCAG 2.0 and 2.1 levels A and AA and produced per-page compliance reports.
- Automated content and structure checks for page titles, meta tags, heading hierarchy, broken links, and image alt text, plus Lighthouse runs to capture Core Web Vitals for stakeholder review.

Software QA Engineer, Urban Resilience Project
RTI International (USA), Dhaka, Bangladesh

Mar 2020 to Dec 2023

- Led a cross-functional QA team on the Electronic Construction Permitting System (ECPS), gathering business requirements directly from end users and working with stakeholders, developers, and government users through the full SDLC.
- Automated high-risk, repetitive test cases with Selenium and Python, which reduced manual testing effort by 20% and improved team efficiency by 15%.
- Defined the QA strategy, release readiness criteria, and a risk-based testing approach. Designed the test frameworks and maintained test environments that closely matched production.
- Ran the testing for a secure payment gateway integration in ECPS, which enabled payments by debit card, credit card, and mobile banking.
- Wrote and executed test plans and test cases for functional, integration, regression, end-to-end, UAT, and API testing, and managed defects from identification and triage through verification and closure.
- Carried out load, spike, and stress testing with JMeter to check performance under peak conditions. Tracked tasks in Jira and kept documentation in Confluence.

Senior Software Quality Assurance Engineer
Wipro Ltd. (GrameenPhone Project), Dhaka, Bangladesh

Sep 2018 to Feb 2020

- Tested more than 20 solutions in real time across Bangladesh's largest telecom network to confirm performance and reliability.
- Led over 25 User Acceptance Testing cycles and delivered more than 55 training sessions for end users and stakeholders.
- Set up and managed pre-production backend test environments, including MySQL databases, to support System Integration Testing (SIT).
- Did API and backend validation to confirm reliable integration between telecom applications and enterprise systems.
- Investigated the root causes of incidents and problems and put corrective measures in place to stop them recurring.
- Wrote automated test cases in Robot Framework, which reduced manual regression effort.

EDUCATION

Master of Science, Applied Computer Science , Fairleigh Dickinson University, Vancouver, Canada	2024
Master of Science, Project Management , University of the West of Scotland, London, UK	2023
Bachelor of Science, Computer Science , National University, Gazipur, Bangladesh	2004

CERTIFICATIONS AND ADDITIONAL INFORMATION

- **ISTQB Certified Tester**, International Software Testing Qualifications Board
- 2024 to 2025: relocated to Canada and completed an MSc in Applied Computer Science in Vancouver, BC, while keeping automation skills current through personal Playwright, API, and performance testing projects.
- Open to onsite, hybrid, and remote roles across Canada, including relocation. Eligible to work in Canada.
