

NIGAR KANA

Software QA Engineer | Test Automation | Playwright | API Testing

ISTQB Certified | Playwright | Selenium | API Testing | Open to Relocation

Richmond, British Columbia, Canada | +1 672-833-7775 | nigarkana@gmail.com | linkedin.com/in/nigarkana | github.com/nigarkana | nigarkana.github.io

SUMMARY

Software QA Engineer with 10+ years of progressive experience delivering quality assurance across telecom, government, and e-commerce applications. Skilled in manual and automated testing with Playwright and Selenium, API testing with Postman, SQL-based data validation, and performance testing with JMeter and k6. Proven track record leading QA teams, defining test strategy, and reducing manual testing effort through automation. Comfortable working in Agile environments across cross-functional and cross-timezone teams. Eligible to work in Canada.

CORE COMPETENCIES

Test Strategy & Planning • Test Automation • API Testing • Regression & Risk-Based Testing • Requirements Analysis • Defect Management • Release Validation • Cross-Functional Collaboration

SKILLS & EXPERTISE

Programming Languages	Python, JavaScript
Test Automation	Playwright, Selenium, Robot Framework
API Testing	Postman, REST APIs, OpenAPI
Performance Testing	JMeter, k6
Databases	SQL, MySQL
Tools & Platforms	Jira, Confluence, Trello, Bugzilla, Git, GitHub Actions, PyCharm, VS Code
Methodologies	Agile, Scrum, SDLC, STLC
AI-Assisted Quality Engineering	ChatGPT, Claude, Claude Code (AI coding assistant) — test case generation, automation framework/script development, exploratory/bug analysis

EXPERIENCE

Information Systems Quality Assurance (QA) Analyst <i>Swavu Ltd — Remote, Canada (Rwanda-based retail platform)</i>	Feb 2026 – Present <i>12-Month Contract</i>
• Serve as the founding QA hire for Swavu's unified Mobile and Web platform — loyalty, product authenticity/QR verification, shop locator, and returns — building the QA practice from the ground up for a small, fast-moving team of 2-3 developers. • Reviewing requirements, wireframes, design documents, and system architecture across all platform modules, and mapping the full Mobile → Zoho Mail → CRM integration workflow to define test scenarios for each stage. • Defining the QA strategy — test types, coverage targets, environments, tooling, and data management approach — for the full 12-month engagement. • Setting up a Playwright automation framework for web and mobile surfaces and configuring CI/CD pipeline integration with GitHub Actions. • Building a test case library covering all platform modules and establishing defect tracking workflows and reporting cadences. • Establishing QA standards and procedures to be applied consistently across the development lifecycle. • Leveraging AI coding assistants (GitHub Copilot, Claude) to accelerate test automation scripting and maintain delivery velocity.	
Software QA Engineer (Volunteer) <i>A Fish Company — Surrey, BC, Canada</i>	Jun 2026 – Present <i>3 hrs/week</i>
• Design and execute manual and automated test cases (functional, regression, end-to-end) for a live Shopify e-commerce site, covering cart, checkout, payment, and order confirmation workflows. • Developed and maintained a Playwright automation framework using JavaScript and Page Object Model (POM) design, integrated with GitHub Actions for continuous execution. • Validated REST API request/response payloads using Postman and ran k6 load tests to gauge application stability under concurrent traffic. • Applied ChatGPT, Claude, and Claude Code (AI coding assistant) to expedite test case generation, automation script development, and exploratory/bug analysis, with manual review and validation applied to all AI-assisted outputs.	
Test Team Lead (Consultant), Urban Resilience Project (URP)	Mar 2020 – Dec 2023

RTI International, USA — Dhaka, Bangladesh

- Led a cross-functional QA team delivering end-to-end quality assurance for the Electronic Construction Permitting System (ECPS), gathering business requirements directly from end users and collaborating with stakeholders, developers, and government users throughout the SDLC.
- Formulated QA strategy, release readiness criteria, and a risk-based testing approach; designed test frameworks and maintained test environments that closely replicated production systems.
- Directed testing for the integration of a secure payment gateway into the ECPS, enabling seamless transactions via debit, credit, and mobile banking platforms.
- Developed and executed test plans and test cases spanning functional, integration, regression, end-to-end, UAT, and API testing; managed defects through their full lifecycle — identification, triage, verification, and closure — using the Incident Management bug tracker.
- Ran load, spike, and stress testing using JMeter to validate system performance under peak conditions.
- Automated high-risk, repetitive test cases using Selenium and Python, reducing manual testing effort by 20% and increasing team efficiency by 15%.
- Coordinated task tracking in Jira and led documentation and knowledge-sharing efforts in Confluence.

Sr. Software Quality Assurance Engineer

Sep 2018 – Feb 2020

Wipro Ltd. (GrameenPhone Project) — Dhaka, Bangladesh

- Executed real-time testing for 20+ solutions across Bangladesh's largest telecom network to ensure performance and reliability.
- Established and managed pre-production backend testing environments, including MySQL databases, to support effective System Integration Testing (SIT).
- Conducted API and backend validation to ensure reliable integration between telecom applications and enterprise systems.
- Diagnosed root causes of incidents and problems and implemented corrective measures to prevent recurrence.
- Led 25+ User Acceptance Testing (UAT) cycles and delivered 55+ training sessions for end users and stakeholders.
- Collaborated effectively across multiple time zones and interdisciplinary teams throughout the release lifecycle.
- Scripted automated test cases using Robot Framework, reducing manual regression effort.

Software Quality Assurance Engineer (Lead)

Nov 2014 – Aug 2018

Raven Systems Ltd. (DIRD Group) — Dhaka, Bangladesh

- Tested DIRD Management Systems — HRM, Payroll, Inventory, Procurement, and Fixed Asset Management — supporting 30,000 daily users.
- Contributed to the successful release and production stability of the "Sheiboï" mobile application for Android and iOS through comprehensive functional and regression testing.
- Instituted standardized QA processes, tools, and best practices — test case design, execution, defect tracking, and reporting — continuously improving methodologies to increase efficiency.
- Engineered automated regression suites for high-risk, repetitive test scenarios using Selenium and Python, cutting manual test execution by 25% and lifting QA throughput by approximately 20%.

EDUCATION

Master of Science in Applied Computer Science

2024

Fairleigh Dickinson University — Vancouver, Canada

Master of Science in Project Management

2023

University of the West of Scotland — London, UK

Bachelor of Science in Computer Science

2004

National University — Gazipur, Bangladesh

CERTIFICATIONS

- ISTQB Certified Tester — International Software Testing Qualifications Board

ADDITIONAL INFORMATION

- Availability: Open to full-time roles in Vancouver, BC (in-office) and to relocation elsewhere in Canada. Eligible to work in Canada.
